

INTERNSHIP REPORT

Evaluation - 2

*An internship report submitted for the partial fulfillment of academic
requirements for the award of Degree*

in

BACHELOR OF ENGINEERING

In Department of

INFORMATION SCIENCE & ENGINEERING

Internship (BIS803)

Submitted by

Jeevan P K

4NI22IS086

Carried out at

Technotut Solution LLP

Mysuru

Under the supervision of

Ms. Prajakta Madankar

Assistant Professor

Department of Information Science and Engineering,

NIE, Mysuru

Department of Information Science & Engineering

The National Institute of Engineering

North Campus

(An Autonomous Institute under Visvesvaraya Technological University, Belagavi)

2025 - 2026

The National Institute of Engineering, Mysuru

(An Autonomous Institute under Visvesvaraya Technological University, Belagavi)

Recognized by AICTE, New Delhi

DEPARTMENT OF INFORMATION SCIENCE & ENGINEERING

CERTIFICATE

Certified that the **Internship (BIS803)** carried out in **Technotut Solutions LLP**, by **Jeevan P K**, bearing USN **4NI22IS086**, a bonafide student of 8th Semester has submitted this report as a part of partial fulfillment for the award of Bachelor of Engineering Degree in Information Science and Engineering of **The National Institute of Engineering, Mysuru**, an autonomous institute under Visvesvaraya Technological University, Belagavi during the academic year 2025-2026.

The internship report has been approved as it satisfies the academic requirements in respect of Internship Work prescribed for the award of the said Degree.

Signature of the Guide

Ms. Prajakta Madankar
Assistant Professor
Dept of ISE, NIE, Mysore

Signature of the Head

Dr. Shashank D
Assoc. Professor & Head
Dept of ISE, NIE, Mysore

DECLARATION

I, Jeevan P K bearing USN: 4NI22IS086 student of 8th semester of UG program, Department of Information Science and Engineering, The National Institute of Engineering, Mysuru, hereby declare that the **Internship (BIS803)** work has been carried out in Technotut Solutions LLP by me.

This internship report is submitted to **The National Institute of Engineering**, Mysuru, (An Autonomous institute under VTU, Belagavi) as a part of Review-1 in partial fulfillment of the course requirements for the award of degree in Information Science and Engineering during the academic year 2025-2026.

Further the matter embodied in this report does confine to the Non-Disclosure Agreement (NDA) signed by me in Technotut Solutions LPP.

Place: Mysuru

Date: 12th of March, 2026

Jeevan P K
4NI22IS086

ACKNOWLEDGEMENT

I am extremely thankful to Dr. B S Nagendra Parashar, Principal, NIE, Mysuru, for providing the opportunity and everlasting motivation to carry out an internship and shape our careers.

I express my sincere gratitude to Dr. Shashank D, Associate Prof. and Head, Dept. of Information Science and Engineering, NIE, Mysore, for his stimulating guidance, continuous encouragement, and motivation throughout the course of the present work.

I extend my gratitude to our Guide **Ms. Prajakta Madankar**, Assistant Professor, Dept. of Information Science and Engineering, and Internship Coordinators **Dr. Suhaas K P**, Associate Professor and **Dr. Mayura Tapkire**, Associate Professor, Dept. of Information Science and Engineering, NIE, Mysuru, for their support and guidance over the entire course of work.

I extend my thanks to my manager, Ms. Aishwarya L, HR and the entire team at in Technotut Solutions LLP, for their continuous support during my 25 weeks tenure in Technotut solutions LLP.

Jeevan P K
4NI22IS086

ABSTRACT

This internship report presents the learning experience and practical exposure gained during the Data Analyst Internship at Technotut Solutions LLP. The internship was undertaken as part of the academic requirement of Visvesvaraya Technological University, with the objective of understanding real-world applications of data analysis and developing essential analytical skills used in the industry.

The internship primarily focused on learning the fundamental concepts of data analytics and the tools used to analyze and interpret data. During the initial phase of the internship, an orientation was conducted to introduce the importance of data in modern organizations, the role of a data analyst, and the different stages involved in the data analysis process. This helped in understanding how organizations use data to make informed business decisions.

The internship involved learning and practicing various data analysis tools and techniques. Microsoft Excel was used to perform tasks such as data cleaning, sorting, filtering, and basic analysis using formulas and pivot tables. These activities helped in understanding how raw data can be processed and transformed into meaningful information. The internship also included learning database concepts and working with Structured Query Language (SQL) to retrieve and manage data stored in relational databases.

In addition to technical knowledge, the internship helped develop analytical thinking, problem-solving abilities, and professional skills such as communication, teamwork, and time management. The experience also provided exposure to industry work culture and highlighted the importance of documentation, reporting, and clear presentation of analytical results.

Overall, the internship provided valuable practical experience in the field of data analytics and helped bridge the gap between theoretical knowledge and real-world applications. The skills and knowledge gained during this internship will support future academic learning and contribute to building a strong foundation for a career in data analytics and technology.

CHAPTER 1

COMPANY INFORMATION

1.1 Profile

- Technotut Solutions LLP is a full-service technology and skill development organization headquartered in Mysuru, India. The company focuses on bridging the gap between academic learning and industry requirements by providing practical training, internships, and technology solutions. Technotut Solutions offers specialized programs designed to enhance technical knowledge and professional skills among engineering and management students.
- The organization consists of a team of experienced consultants and professionals who are skilled in various technological domains. Through structured training programs, internships, workshops, and career guidance initiatives, the company aims to prepare students for real-world industry challenges. In addition to training services, the organization also provides consulting and technology solutions tailored to the needs of businesses and clients.
- Technotut Solutions LLP is committed to empowering learners by providing access to modern technology education and practical exposure. With a strong focus on innovation, ethical practices, and industry collaboration, the company strives to support both organizational development and individual career growth.

1.2 Description of the Business Unit/Team

- The business unit in which the internship was carried out focuses primarily on technology training, skill development, and project-based learning for students and professionals. The team consists of trainers, mentors, and technical experts who guide interns and learners through practical exposure to modern technologies and industry practices.
- The team works collaboratively to design training modules, conduct workshops, and guide students through real-world technical projects. They also provide mentorship in areas such as data analysis, software development, and emerging technologies. The primary objective of the team is to equip learners with industry-relevant technical skills and practical knowledge that enhance their employability.

1.3 Overall Description of the work carried out by the team

- The team is responsible for conducting structured training programs, internships, and skill development sessions that help students gain practical knowledge in various technological fields. Their work includes designing learning modules, delivering technical training, guiding students in project development, and providing career-oriented mentorship.
- The team also works on analyzing datasets, developing technical solutions, and guiding interns in applying analytical tools and technologies to solve real-world problems. Through collaborative learning and hands-on activities, the team ensures that students gain both theoretical understanding and practical experience in their respective domains.

1.4 Overall of the internship position and responsibilities held

- The team is responsible for conducting structured training programs, internships, and skill development sessions that help students gain practical knowledge in various technological fields. Their work includes designing learning modules, delivering technical training, guiding students in project development, and providing career-oriented mentorship.
- The team also works on analyzing datasets, developing technical solutions, and guiding interns in applying analytical tools and technologies to solve real-world problems. Through collaborative learning and hands-on activities, the team ensures that students gain both theoretical understanding and practical experience in their respective domains.

CHAPTER 2

TECHNOLOGY/TOOLS WORKED

2.1 List of Tools

- **Microsoft Excel**

It was used for data cleaning, sorting, filtering, and basic data analysis by writing simple formulas and functions. It was helpful in structuring unorganized data and summarizing it by using Pivot Tables and charts. Moreover, it made it easier to perform data analysis on small to moderately sized datasets.

- **Structured Query Language (SQL)**

It was used for extracting, filtering, and managing structured data stored in relational databases. The language allowed us to extract useful information from large amounts of data using SELECT, WHERE, GROUP BY, and JOIN commands.

- **Python**

It was used for basic data processing and simple data analysis operations. Python was helpful in automating repetitive processes and analyzing data using Pandas and NumPy libraries. Moreover, it was helpful in transforming data and removing noise from it.

- **Microsoft Power BI**

It was used for data visualization and creating interactive dashboards and reports. Power BI us analyze and present data insights through graphs, charts, and dashboard reports.

CHAPTER 3

DESCRIPTION OF THE WORK CARRIED OUT

3.1 Introduction

An internship experience at Technotut Solutions LLP gave me practical exposure into data analysis and its applications in reality. It is important for any organization that wants to perform better and be more productive in terms of decision-making. Data analytics helps organizations analyze information and identify trends that could aid their decision-making.

In this internship experience, I gained practical insight into data analysis fundamentals through the application of various software tools, including Microsoft Excel, SQL, Python, and Microsoft Power BI. In particular, the process involved learning about various stages involved in data analytics including data acquisition, cleaning, processing, and visualization. This internship program had a progression format where we learned some basics first and then progressed into practical applications. Such a process of learning was helpful in building technical and analytical skills needed in data analytics.

3.2 Write-up on the work

The work done in the internship in Technotut Solutions LLP has been conducted in a systematic manner to establish a firm foundation for data analysis. The first phase was related to acquiring knowledge about the basic aspects of data analytics, the significance of data analytics, and the application of data analytics in practical situations. In this way, there was an opportunity to understand the entire process of data analytics and the position of a data analyst in various organizations.

The second phase was based on the utilization of Microsoft Excel and SQL to manipulate and analyze data. Some examples include sorting, filtering, analyzing, and cleaning data through the use of Microsoft Excel. On the other hand, retrieving and managing data stored in relational databases was performed by using SQL. Therefore, there was an opportunity to learn how raw data is manipulated to provide valuable information. Moreover, there was an introduction to basic programming using Python and report making using Microsoft Power BI. The former was helpful for processing raw data, while the latter was used to create visuals and generate reports. Thus, the work done during the internship offered comprehensive information about the entire process of data analysis.

CHAPTER 4

PERSONAL ROLES AND OBSERVATION

In my internship at Technotut Solutions LLP, I was assigned the job title of a Data Analyst Intern. The task associated with the job involved understanding and implementing practical concepts of data analysis. I attended trainings sessions and successfully accomplished tasks assigned to me on data analysis and data handling. By doing so, I was able to understand the way in which data is processed and used practically to support decisions. I gained experience on how data analytics works by completing various data analysis assignments.

In order to fulfill my role efficiently, I have worked with tools like Microsoft Excel, SQL, Python, and Microsoft Power BI. Using Excel, I cleaned and sorted data; created filters and performed simple data analysis. I have also practiced writing SQL commands to access and work with data stored in databases. Some basics of programming in Python was also included in my tasks along with creating basic visualizations and reports using Power BI.

The internship was accompanied by a variety of problems related to the comprehension of new material, correct usage of SQL queries, and using different software solutions. First, it was complicated for me to learn something new, however, with constant practice and advice of my mentors, I managed to improve. This helped me realize that one should be patient, learn continuously, and solve problems.

In general, I consider this internship beneficial for my personal and professional development. Firstly, I managed to learn how to think analytically and pay attention to details when performing any operations. Second, I have realized that in order to be able to perform complex operations successfully, one needs good time-management skills and effective communication skills.

CHAPTER 5

CONCLUSION

The internship that I attended at Technotut Solutions LLP gave me an invaluable chance to be exposed to the practice and real-life applications of data analysis. Thus, this period was crucial to help me see the transition between theory learned in school and its practice at work. Moreover, the internship was designed systematically and, consequently, gave me time to acquire skills of data analysis starting with basics and going on to practical use.

While working there, I got hands-on training using such software as Microsoft Excel, SQL, Python, and Microsoft Power BI. These softwares enabled me to learn data cleaning, structuring, and analyzing and even creating various visual reports and dashboards.

Another way through which the internship enabled me to develop myself is that I became more competent when it comes to soft skills such as problem-solving, analytical skills, time management, and communication. The various activities I had to undertake at the company made me a better and more confident problem-solver.

In conclusion, it can be said that the internship was an extremely rewarding experience, one that greatly added to my academic knowledge as well as my professional development. The knowledge I gained during the internship will enable me to pursue advanced topics of data analytics in the future. My experience will also serve me very well in my future career in data analysis.

INTERNSHIP DIARY**Number of Internship Days completed upto 10th May****2026 25 days out of minimum of 75 days**

2026-03-06	Worked on writing more complex SQL queries by combining filtering, aggregation, and join operations. Generated a structured query report summarizing dataset insights. Reviewed query performance and corrected errors to improve accuracy.	 
2026-03-05	Practiced SQL JOIN operations to combine data from multiple related tables. Implemented INNER JOIN and LEFT JOIN queries to retrieve integrated datasets. Focused on understanding table relationships and ensuring correct mapping between keys.	 
2026-03-04	Performed hands-on practice with aggregate functions such as COUNT, SUM, and AVG to analyze dataset statistics. Applied GROUP BY to categorize data and generate summarized reports. Focused on deriving insights from grouped information.	 
2026-03-03	Worked on sorting and limiting query results using ORDER BY and LIMIT clauses. Practiced extracting meaningful subsets of data from larger datasets. Focused on improving efficiency in retrieving relevant information for analysis tasks.	 
2026-03-02	Started practical implementation of SQL queries using a sample relational database. Practiced retrieving data from tables using SELECT statements along with filtering conditions using WHERE clause. Focused on understanding query execution and verifying output results for correctness.	 
2026-02-27	Reviewed all SQL concepts learned during the week and documented key query structures. Studied subqueries and basic introduction to indexing and performance optimization concepts. Prepared notes for transitioning into hands-on SQL practice in the upcoming weeks.	 
2026-02-26	Explored different types of SQL joins including INNER JOIN, LEFT JOIN, and RIGHT JOIN. Understood how multiple tables can be combined using common keys. Focused on learning how joins help in integrating data from various sources for analysis.	 

2026-02-27	Reviewed all SQL concepts learned during the week and documented key query structures. Studied subqueries and basic introduction to indexing and performance optimization concepts. Prepared notes for transitioning into hands-on SQL practice in the upcoming weeks.	 
2026-02-26	Explored different types of SQL joins including INNER JOIN, LEFT JOIN, and RIGHT JOIN. Understood how multiple tables can be combined using common keys. Focused on learning how joins help in integrating data from various sources for analysis.	 
2026-02-25	Learned about aggregate functions such as COUNT, SUM, AVG, MIN, and MAX. Studied the GROUP BY and HAVING clauses to summarize and analyze grouped data. Understood how SQL helps in generating business-level summaries from large datasets.	 
2026-02-24	Studied basic SQL queries including SELECT statements, filtering using WHERE clause, and sorting results using ORDER BY. Learned how to retrieve specific data from tables based on conditions. Focused on understanding SQL syntax and query structure.	 
2026-02-23	Introduced to database fundamentals and the importance of SQL in data analytics. Learned about relational databases, tables, rows, columns, primary keys, and foreign keys. Understood how structured data is stored and managed in database systems and how SQL is used to retrieve and manipulate data efficiently.	 
2026-02-20	Consolidated all Excel-based analysis into a structured report format. Reviewed calculations, validated data accuracy, and documented key insights derived from the dataset. Presented findings internally and received feedback for improvement in clarity and accuracy.	 
2026-02-19	Designed interactive dashboards using Pivot Charts, slicers, and formatting tools. Focused on presenting analytical findings in a visually understandable manner for business stakeholders. Ensured clarity and minimalism in dashboard design to improve readability.

Create 

Date	Description	Actions
2026-03-17	Worked with Pandas DataFrames for handling datasets. Learned how to read data, view data, and perform basic operations.	 
2026-03-16	Introduced to advanced Python concepts including libraries used in data analysis such as NumPy and Pandas. Learned their importance in handling data.	 
2026-03-13	Practiced basic Python programs combining loops, conditions, and functions. Reviewed all beginner concepts.	 
2026-03-12	Learned about lists, tuples, and dictionaries in Python. Practiced storing and accessing data using these data structures.	 
2026-03-11	Studied functions in Python and how to reuse code using functions. Learned about parameters and return values.	 
2026-03-10	Learned conditional statements such as if-else and loops like for and while. Practiced writing simple programs using conditions and loops.	 
2026-03-09	Introduced to basics of Python programming language. Learned about syntax, variables, and data types such as integers, strings, and lists. Understood how Python is used in data analysis.

Date	Description	Actions
2026-03-26	Practiced implementing simple ML models using Python libraries. Learned how to input data and generate predictions.	 
2026-03-25	Studied basic ML algorithms such as Linear Regression and Classification models. Understood how models are trained and used for predictions.	 
2026-03-24	Learned about data preprocessing techniques required before applying ML models such as data cleaning, normalization, and splitting datasets.	 
2026-03-23	Introduced to basics of Machine Learning and its role in data analysis. Learned about supervised and unsupervised learning concepts and their real-world applications.	 
2026-03-20	Combined all advanced concepts to perform small data analysis tasks using Python. Reviewed learning and prepared for future project work.	 
2026-03-19	Learned basic data visualization using Matplotlib. Created simple graphs and charts to represent data visually.	 
2026-03-18	Performed data cleaning operations using Pandas such as handling missing values, removing duplicates, and filtering data.
